The Parks & Gardens UK Thesaurus was developed to assist volunteers in their research and allow them to use consistent terminology when noting particular aspects of historic parks, gardens and designed landscapes. The Thesaurus is also used for data entry and resides in the database with a hierarchical structure. Many researchers and students have found that it is a useful quick reference tool when doing desk and field research, so we have created an A-Z version. The [ ] are used to cross reference which Key Field category the term can be found within in the database.
